

Ben Gideon Dokiburra | Software Developer

📍 HOUSTON, TX | ✉ bengideonokiburra@gmail.com | ☎ +1(281) 836-1597 | 🔗 LinkedIn | GitHub

SUMMARY

- Nearly **3.5 years of experience** as a **Software Developer** in **IT and Healthcare domains**, developing **Java, Python, and C# applications**, **delivering enterprise-grade solutions** for clinical data processing, business workflow automation, and secure system integrations **across** multi-tier architectures.
- Designed and developed **RESTful services, Microservices Architecture** using **Spring Boot, .NET Core, Node.js, Django**, delivering 15-20 scalable services that supported high-availability IT platforms and HIPAA-aligned healthcare systems.
- Built responsive web applications and dashboards using **React.js, Angular, Next.js, HTML5, CSS3, and Tailwind CSS**, improving UI performance and reducing page load times by 20% across internal and customer-facing systems.
- Worked extensively with relational and NoSQL databases including **PostgreSQL, MySQL, SQL Server, MongoDB, Redis**, optimizing queries and database design to improve data retrieval efficiency by 25% for IT and clinical data workloads.
- Implemented cloud-native solutions on **AWS, Microsoft Azure, Google Cloud Platform (GCP)** using **EC2, S3, Lambda, RDS, CloudWatch** to deploy and monitor applications supporting both enterprise IT operations and healthcare data pipelines.
- Containerized and orchestrated applications using **Docker, Kubernetes**, standardizing deployments across environments and reducing release-related issues by ~30% through consistent CI/CD pipelines.
- Automated build, test, and deployment workflows using **Jenkins, GitHub Actions, Azure DevOps, Terraform, Infrastructure as Code (IaC), Git**, enabling faster release cycles and improving deployment reliability across distributed systems.
- Developed event-driven and message-based systems using **Kafka, AWS SQS**, handling asynchronous processing, notifications, and real-time updates for IT services and healthcare-related workflows.
- Applied strong testing and quality engineering practices using **JUnit, PyTest, Jest, Mocha, Postman, Test-Driven Development (TDD)**, maintaining high code quality and reducing post-release defects by approximately 20%.
- Integrated AI-driven capabilities into applications using **OpenAI APIs, Prompt Engineering, Dash, Plotly**, supporting analytics, automation, and intelligent insights for IT platforms and healthcare use cases.
- Experienced in **Agile Scrum, Kanban**, collaborating with cross-functional teams using **Jira, Confluence**, participating in code reviews, sprint planning, and delivering fault-tolerant, scalable systems aligned with business and regulatory needs.

TECHNICAL SKILLS

Programming Languages:	Java, Python, C#, JavaScript (ES6+), TypeScript, SQL, C++, Golang
Development Frameworks:	Spring Boot, Hibernate, JPA, .NET Core, Node.js, Express.js, Django, Flask, Django REST Framework
Web & Application Development:	RESTful Services, Microservices Architecture, React.js, Next.js, Angular, HTML5, CSS3, Bootstrap, Tailwind CSS, JSON, XML, WebSockets, OpenAPI (Swagger)
Databases & Data Technologies:	PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Snowflake, Database Design, Query Optimization
Cloud Platforms:	AWS (EC2, S3, Lambda, RDS, CloudWatch), Microsoft Azure, Google Cloud Platform (GCP)
DevOps & CI/CD:	Docker, Kubernetes, Jenkins, GitHub Actions, Azure DevOps, Terraform, CI/CD Pipelines, Infrastructure as Code (IaC), Git
API & System Integration:	REST APIs, GraphQL, Third-Party API Integrations (Microsoft Teams, Zoom, Google Meet), Event-Driven Architectures, Message Queues (Kafka, SQS)
Testing & Quality Engineering:	JUnit, PyTest, Jest, Mocha, Postman, Automated API & UI Testing, Test-Driven Development (TDD)
AI / ML & LLM Technologies:	LLM Integration, OpenAI APIs, Prompt Engineering, AI-Driven Application Development, Data-Driven Applications (Dash, Plotly)
Tools & IDEs:	IntelliJ IDEA, Eclipse, Visual Studio Code, Jira, Confluence, Swagger, Postman
Development Methodologies:	Agile Scrum, Kanban, Continuous Integration & Deployment (CI/CD), Code Reviews, Distributed Systems, Fault-Tolerant System Design

PROFESSIONAL EXPERIENCE

United Health Group, Minnesota | June 2025 – Current Software Developer

- Designed and maintained backend services using **Java, Spring Boot**, and **Hibernate** for healthcare workflows including patient enrollment, provider management, and claims processing, supporting **10K+** active patient records with consistent uptime and compliance-driven logic.
- Developed and documented **RESTful APIs** within a **Microservices Architecture** using **OpenAPI (Swagger)**, enabling secure data exchange between clinical, billing, and reporting systems with **sub-200 ms average response time**.
- Designed relational schemas and optimized complex joins using **PostgreSQL** and **MySQL**, improving report generation performance and reducing long-running healthcare queries by **30%**.
- Deployed and monitored healthcare applications on **AWS EC2, S3, and RDS**, leveraging **CloudWatch** for logging and alerts to ensure system reliability across production environments.
- Containerized backend services using **Docker** and deployed them on **Kubernetes** clusters, enabling consistent builds across environments and supporting rolling deployments with minimal downtime.
- Implemented asynchronous event processing using **Kafka** and **event-driven architecture** patterns for appointment updates and notifications, improving system scalability and service decoupling.
- Wrote unit and API test cases using **JUnit, Postman**, and **TDD** practices, maintaining **80%+ test coverage** for critical healthcare workflows and reducing regression defects.
- Integrated AI-powered features using **LLM integration** and **OpenAI APIs** for clinical note summarization and patient inquiry handling, improving internal productivity and reducing manual documentation effort.

- Collaborated in **Agile Scrum** teams using **Jira**, participating in sprint planning, daily stand-ups, and **code reviews** to deliver compliant healthcare features on a **bi-weekly release cycle**.
- Developed and optimized **stored procedures** using **SQL Server, PostgreSQL, and MySQL**, supporting scheduled batch processes for healthcare data processing and reporting workflows; created process flows and system documentation using **MS Office** and **Visio**.
Environment: Java, Spring Boot, Hibernate, RESTful APIs, Microservices Architecture, OpenAPI (Swagger), PostgreSQL, MySQL, AWS (EC2, S3, RDS, CloudWatch), Docker, Kubernetes, Apache Kafka, Event-Driven Architecture, JUnit, Postman, TDD, OpenAI APIs, LLM Integration, Agile Scrum, Jira.

United Health Group, Minnesota | Jan 2025 – May 2025

Software Developer (Intern)

- Assisted in developing backend APIs using **Python, Django, and Django REST Framework** for patient data intake and appointment scheduling modules, following HIPAA-aware design and secure coding standards.
- Implemented frontend components using **JavaScript (ES6), React.js, and Bootstrap**, improving form validation and usability for non-technical healthcare administrative users.
- Created and modified schemas using **SQL Server** and sound **database design** principles to support accurate storage of patient and provider records.
- Contributed to lightweight backend services using **Node.js** and **Express.js** for notification handling and audit logging features across healthcare applications.
- Supported deployment activities using **AWS EC2** and **S3**, assisting with environment setup, configuration, and basic application monitoring.
- Learned and applied containerization and CI/CD practices using **Docker, Git, and CI/CD pipelines**, contributing to automated build and deployment workflows.
- Executed unit and API tests using **JUnit, PyTest, and Postman** to validate functionality and identify defects early in the development lifecycle.
- Assisted with **third-party API integrations** for messaging and video platforms to support telehealth workflows and internal communication features.
- Worked within **Agile Scrum** teams using **Jira** and **Confluence**, documenting technical updates and tracking tasks to ensure timely sprint delivery.
Environment: Python, Django, Django REST Framework, JavaScript (ES6), React.js, Bootstrap, SQL Server, Node.js, Express.js, AWS EC2, AWS S3, Docker, Git, CI/CD Pipelines, JUnit, PyTest, Postman, Agile Scrum, Jira, Confluence.

Cybage Software, India | Feb 2021 – June 2023

Software Engineer

- Built scalable, data-driven APIs for user management and reporting modules using **Python** and **Django REST Framework**, optimizing **PostgreSQL** queries to improve average response time by 20% in non-production environments.
- Designed responsive and reusable UI components using **JavaScript (ES6+)** and **React.js**, integrating REST APIs and implementing client-side validations that reduced UI-related defects by 25% during sprint testing.
- Implemented lightweight microservices to handle authentication and notification workflows using **Node.js** and **Express.js**, processing JSON-based requests and supporting ~1K+ daily transactions in development setups.
- Documented and validated application endpoints using **REST APIs, Swagger (OpenAPI), and Postman**, collaborating with frontend and QA teams to ensure contract accuracy and reduce integration issues by ~30%.
- Deployed and supported applications on cloud infrastructure using **AWS EC2, S3, and RDS**, monitoring logs and performance metrics through **CloudWatch** to identify errors and improve application stability.
- Containerized applications and streamlined deployments using **Docker** and **Git-based CI/CD pipelines**, enabling consistent builds across environments and reducing manual deployment efforts by 40%.
- Created unit and integration test cases for backend and frontend modules using **JUnit, PyTest, and Jest**, following TDD principles and achieving 70% test coverage for critical application components.
- Assisted in implementing asynchronous communication between services using **Kafka** and **AWS SQS**, supporting event-driven workflows and improving reliability during peak load simulations.
- Actively participated in Agile delivery processes using **Scrum, Jira**, and peer **code reviews**, resolving ~8–10 user stories per sprint while following coding standards and documentation best practices.
Environment: Python, Django REST Framework, JavaScript (ES6+), React.js, Node.js, Express.js, PostgreSQL, REST APIs, Swagger (OpenAPI), Postman, AWS EC2, S3, RDS, CloudWatch, Docker, Git, CI/CD Pipelines, JUnit, PyTest, Jest, Kafka, AWS SQS, Agile Scrum, Jira.

EDUCATION

Master of Science, Computer Science

University of Houston | Houston, Texas | Aug 2023 – May 2025

Bachelor of Technology (B.Tech) in Computer Science

Vellore Institute of Technology, Amaravati | Aug 2017 – May 2021

CERTIFICATIONS

- **AWS Certified Developer – Associate (2025)** | [LINK](#)
